

Draught Beer Troubleshooting Guide

Issue	Keg	Gas	Cooler	Beer lines	Faucet	FOB	Coupler	Glycol	Glassware	Staff
no beer	empty	empty								
	incorrect series hook up	gas turned off		obstructed beer lines		FOB not reset properly	in 'off' position	lines frozen		
		faulty regulator								
Foaming	keg is emptying and no FOB	wrong gas blend	cooler is too warm	hot spots in lines (bursting)	needs to be cleaned	FOB not reset properly	damaged gasket	temperature too high	frozen glasses	poor pouring technique
	damaged valve gasket	pressure setting is too high	blower fan is not working	constricted lines (kinked)			loose connections	dirty glycol unit, needs to be cleaned		
	keg has not settled	not enough secondary regulators					coupler needs to be cleaned	pump not circulating		
	keg is warm	faulty regulators						glycol needs to be changed		
			not enough pressure (bursting)							
Flat Beer	old beer (after 1 week?)	not enough secondary regulators	too cold	not enough restriction	is the creamer plate missing			too cold	dirty glasses	poor pouring technique
		faulty regulators								
		primary regulator set too low								
		wrong gas mixture								
Off Taste	old beer	wrong gas mixture	too warm	lines in cooler should be replaced	needs to be cleaned	needs to be cleaned	check for bacteria		glassware not 'beer clean'	poor handling techniques
			mold present
